Ozone - New Weapon To Combat Farm Infections!

Ozone has been disinfecting drinking water for over 100 years! Now at high concentration ozone finds a front-line role in decontamination of our livestock and poultry

Marlow-based Ozone-Direct.Com with O3Technology AB of Sweden supplies decontamination wash-down systems employing ozone gas to kill pathogens and combat infections in animals and poultry.

Ozone has been used for disinfecting drinking water for over 100 years! Now at high concentration ozone finds a front-line role in battling infections in our livestock and poultry farms.

The [AC-Sprint®](#) system delivers ozone dissolved in water in the form of a pressure spray to wash-down and disinfect animal enclosures, handling pens, packing crates feeding systems and for decontamination of vehicles at the farm gate. The same system can deliver ozone in gaseous form to fumigate sealed enclosures vessels or containers.

The [AC-Sprint®](#) is a compact wheeled system, powered by 230v electrical supply with a quick connector to the farm water supply.

Ozone is 50-times more powerful than chlorine and when dissolved in water is a highly-potent disinfecting medium, without the need for heat or chemicals and without producing environmentally-persistent chemical effluent...

Topical applications include; decontamination of poultry houses, poultry crates, feeding systems transport containers and vehicles entering and leaving poultry farms..

Peter Aldiss of Ozone-Direct.Com says, "This technology has been under development for some years and sadly was not available during previous animal health scares, such as the Foot & Mouth outbreak, however, we believe the technology offers real advantages in simplicity and convenience of use, which means it will be used when less convenient systems may stand idle.

The [AC-Sprint®](#) system is available from info@ozone-direct.com
